

Anirudhya Singh

Senior Full Stack Software Engineer

Gurgaon, India — singhsmarty31@gmail.com — LinkedIn

Professional Summary

Senior Full Stack Software Engineer with over **5 years of experience** designing and developing scalable enterprise applications using **.NET Core, C#, Angular, SQL Server, and Microservices**. Experienced in building distributed systems, API Gateway architectures, real-time monitoring platforms, and enterprise security applications. Strong understanding of system design, REST APIs, performance optimization, Redis caching, SignalR, and secure software development. Proven ability to own features end-to-end while collaborating with cross-functional teams to deliver highly available, production-ready solutions.

Technical Skills

- **Languages:** C#, TypeScript, JavaScript, SQL
- **Backend:** .NET Core, ASP.NET Core, REST APIs, Microservices, SignalR, gRPC
- **Frontend:** Angular, RxJS, NgRx, Signals, HTML5, CSS3
- **Databases:** SQL Server, Redis, NoSQL, CouchDB
- **Architecture:** Distributed Systems, API Gateway, Event-Driven Architecture, HLD, LLD, SOLID Principles, Design Patterns
- **Tools & DevOps:** Azure DevOps, Git, Docker, CI/CD, Agile/Scrum

Johnson Controls

Senior Software Engineer

Gurgaon, India
Aug 2024 – Present

- Designed and enhanced enterprise-grade **Access Control and Video Management** solutions using .NET Core and Angular, enabling secure device, user, and access management across distributed enterprise environments.
- Contributed to the design and implementation of a centralized **API Gateway** architecture to simplify inter-service communication and reduce dependencies between enterprise security applications.
- Participated in **High-Level and Low-Level Design (HLD/LLD)** discussions, translating business requirements into scalable, maintainable, and secure software solutions.
- Developed **SignalR-based real-time event streaming** to provide live updates for controller status, access events, alarms, door operations, and hardware health monitoring.
- Built and maintained Angular-based administrative modules while collaborating closely with Product Managers, QA teams, and UX designers to deliver intuitive user experiences.
- Improved application responsiveness through SQL query optimization, efficient data access strategies, and Redis caching for frequently accessed data.
- Performed architectural code reviews, resolved production issues, and mentored junior developers on clean architecture, coding standards, and best engineering practices.

GEP Worldwide

Software Engineer

Mumbai, India
Jul 2021 – Aug 2024

- Developed enterprise procurement and supply chain applications using .NET Core, Angular, REST APIs, and SQL Server for global customers.
- Designed and implemented scalable backend APIs, business workflows, and responsive Angular modules for high-volume enterprise transactions.
- Improved application performance by approximately 40% through SQL query tuning, efficient indexing strategies, and backend performance optimization.
- Worked closely with cross-functional teams in an Agile environment to deliver multiple production releases while maintaining high code quality.
- Automated build and deployment workflows using Azure DevOps pipelines and proactively resolved production issues through debugging and root cause analysis.

Projects

CodeArena – AI-Powered Coding Platform

Live Demo — [GitHub](#)

- Architected and developed a full-stack competitive programming platform using **.NET 10, Angular 18, SQLite, and Docker**, implementing **Clean Architecture** and the **CQRS pattern (MediatR)** for highly decoupled code.
- Engineered an automated AI judging engine by integrating the **Groq API (Llama 3)** via **Microsoft Semantic Kernel**, instantly evaluating user code submissions for functional correctness and Big-O Time/Space complexity.
- Implemented real-time bidirectional communication using **SignalR WebSockets** to stream live compilation and evaluation status updates directly to the Angular UI.
- Containerized the application using Docker for a streamlined CI/CD workflow, successfully deploying the monolithic full-stack application to **Render** for public access.

Enterprise Security Management Platform (In Progress)

- Designing and developing a distributed enterprise security platform inspired by modern Access Control and Video Management Systems using **.NET 8, Angular, SignalR, SQL Server, Redis, Docker, and Clean Architecture**.
- Building a modular microservices-based solution consisting of **API Gateway, Identity Service, Device Management, Access Control, Event Processing, and Notification Services** to simulate large-scale enterprise deployments.
- Implementing real-time device monitoring, controller health tracking, access event streaming, JWT authentication, role-based authorization, Redis caching, centralized logging, and production-style deployment using Docker Compose.

Education

Indian Institute of Information Technology (IIIT), Bhopal

2017 – 2021

Bachelor of Technology (B.Tech.) in Computer Science and Engineering
